

SAFE SPACE SOLUTIONS

THE THERMAL TEMPERATURE DEVICE & AI PLATFORM

As you get back to business, let us help protect your most valuable assets: your people and physical space

This solution is a no-contact, fever inspection kiosk with advanced Analytics capabilities. It makes real-time temperature inspection easy, fast, and remarkably accurate. Empowered with an Artificial Intelligence [AI] layer tool, that can be customized to remember employees, guests, or customers. When paired with a digital screen, can display key confidence measures that consumers find reassuring before they enter. And, remains relevant for use as a standard digital signage kit to display key content during seasonal downtimes.

SAFETY MADE SIMPLE

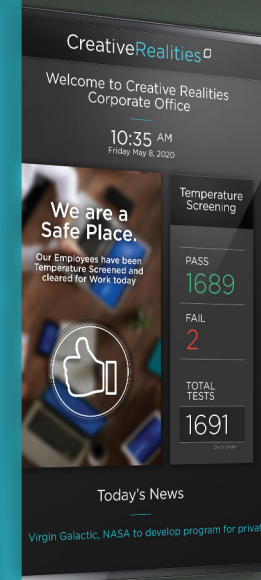

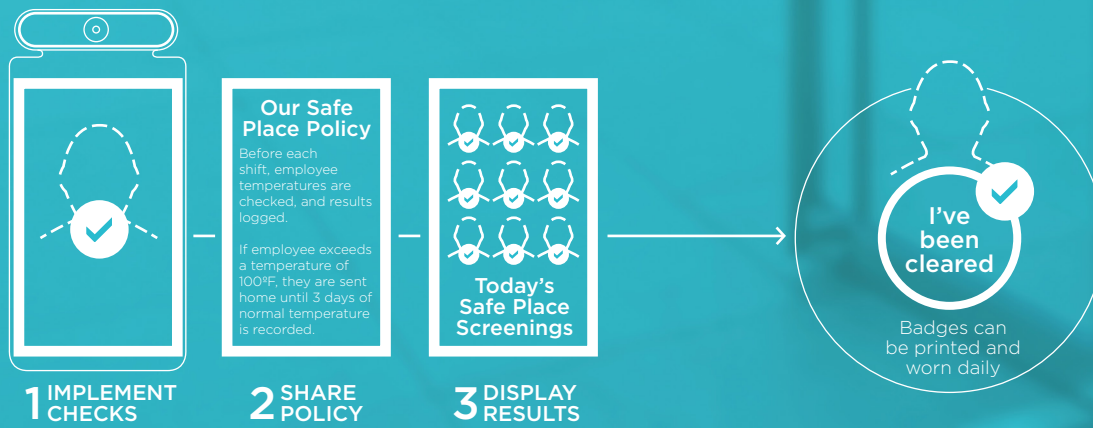

- No-contact remote forehead temperature inspection
- Multi-point temperature: Stop, Scan, View and Log instantly, with output +/- 1 second
- Reliable accuracy +/- 0.5°C | +/- 0.9°F
- Works by facial detection, with or without mask
- If individual exceeds temperature limits, notification can happen – and delivered via email or SMS
- Works immediately after the device is powered on – no calibration needed

THE AI ENGINE IS THE DIFFERENCE

- Connect and synchronize multiple points of entry – aggregated to a single, unified dashboard
- Customizable to conform to Safe Space, HR, Legal, Privacy or other Corporate Compliance requirements
- AI-enabled with rules engine so it learns patterns, and can trigger smart alerts on anomalies or other indicators
- Dashboard provides daily reports, trending, and alerts based on set KPIs – and can be accessed remotely

INTEGRATES EASILY WITH OTHER API, DATA AND CLOUD-BASED SERVICES

- When enabled, the engine creates event logs according to any compliance – and stored in the Cloud
- Other platform analytics, device or access controls can be integrated
- Solution incorporates Remote Device Management and over-the-air update
- Remote troubleshooting allows hassle-free maintenance and support through a SaaS model
